EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Svetlana Z. Short on 3/12/09.

The application has been amended as follows:

Please cancel withdrawn claims 1-9 and 17-22.

Please replace Claim 10 as filed on 2/2/09 with the following:

10. A solid oxide electrode/electrolyte assembly comprising:

a thin electrolyte sheet made of partially stabilized zirconia and having varied thickness and an average electrolyte sheet thickness between 3 micrometers and 30 micrometers;

a plurality of cathode and anode pairs comprising: (a) a plurality of cathodes disposed on a first surface of said electrolyte sheet; (b) a plurality of anodes disposed opposite the cathodes on a second surface of said electrolyte sheet;

a plurality of interconnects situated in via galleries, said via galleries being located between said plurality of electrodes;

Application/Control Number: 10/611,507 Page 3

Art Unit: 1795

wherein said electrolyte sheet is bendable to an effective radius of curvature of less than 20 cm, has a surface with a pre-determined re-producible pattern and a thickness variation of at least 2 micrometers and its thickness variation is 6.6% to 90% of the average electrolyte sheet thickness, and

wherein at least 50% of the area of the electrolyte sheet situated between said cathode and anode pairs has a thinner body than the rest of the electrolyte sheet situated between said cathode and anode pairs and wherein the average thickness of the electrolyte sheet situated between said cathode and anode pairs is smaller than the average thickness of the electrolyte sheet in via galleries.

Please replace Claim 23 as filed on 2/2/09 with the following:

23. A solid oxide electrode/electrolyte assembly comprising:

a thin solid oxide electrolyte sheet made of partially stabilized zirconia and bendable to an effective radius of curvature of less than 20 cm, said electrolyte sheet being of varied thickness of an average electrolyte sheet thickness between 3 micrometers and 30 micrometers and thickness variation of at least 0.5 micrometers and ohmic resistance of no more than 0.5 ohm-cm2;

 (a) a plurality of cathodes disposed on a first surface of said electrolyte sheet; and (b) a plurality of anodes disposed opposite said plurality of cathodes on a second surface of said electrolyte sheet, forming a plurality of cathode and anode pairs; wherein there are multiple thinner electrolyte sheet areas situated between said plurality of cathode and anode pairs, wherein at least 75% of the area of the electrolyte sheet situated between said plurality of cathode and anode pairs has a thinner body than the rest of the electrolyte sheet situated between said plurality of cathode and anode pairs and,

wherein the average thickness of the electrolyte sheet situated between said plurality of cathode and anode pairs is smaller than the average thickness of the electrolyte sheet not situated under between said plurality of cathode and anode pairs, wherein said solid oxide electrode/electrolyte assembly does not include interconnect plates.

Reasons for Allowance

The following is an examiner's statement of reasons for allowance: The invention is drawn to a solid oxide fuel cell with a textured electrolyte situated between multiple anode and cathode pairs. An interconnect is provided to connect the anodes with the cathodes in a region that has an average thickness greater than the average thickness of the rest of the electrolyte sheet that is located between the anode and cathode.

The closest prior art, US 2003/0180602 (Finn) and US 2002/0012825 (Sasahara) do not teach or suggest a fuel cell such that multiple anodes and cathodes are located on the textured electrolyte sheet and where the solid oxide fuel cell has the textured electrolytic sheet having an interconnect located in an area that has a greater average thickness than the area between cathode and anode pairs.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

The following prior art is made of record and is considered pertinent to applicant's disclosure: US 2001/0044041 (Badding), US 2002/0102450 (Badding) & US 5,531,019 (Taira).

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to KEITH WALKER whose telephone number is (571)272-3458. The examiner can normally be reached on Mon. - Fri. 8am - 5pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Patrick Ryan can be reached on 571-272-1292. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
